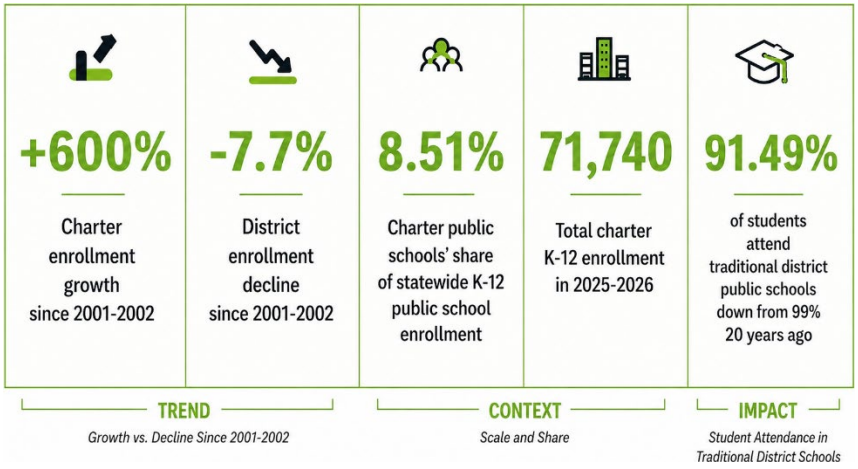
Executive Summary 4

Minnesota Statewide Public Education K-12 Demographics 8

Minneapolis District and Charter K-12 Enrollment Demographics 11

Saint Paul District and Charter K-12 Enrollment Demographics 15

Executive Summary



Over the past **two decades**, Minnesota's public education landscape has shifted significantly, with declining traditional district enrollment alongside substantial growth in charter school enrollment. Since **2002**, the Center for School Change (CSC) now known as Catalyst for Systems Change, has compiled and analyzed demographic data from the Minnesota Department of Education (MDE) regarding **K-12** public school enrollment in the state's district and chartered public schools. This endeavor aims to contribute to informed public discourse. All population counts are derived from October enrollment data reported to MDE, accessible through the Data Center.

Thanks to MDE staff and the Minnesota Association of Charter Schools for their invaluable assistance. The CSC does not assert that district public schools or chartered public schools are inherently 'better' overall. In our testimony, reports, and newspaper columns, we advocate for educators, families, and policymakers to utilize multiple measures when assessing school effectiveness. Furthermore, we advocate for the broader adoption of the faculty, programs, and policies of the most effective public schools in Minnesota, irrespective of governance.

This report specifically focuses on **K-12** enrollment patterns and demographics, excluding Pre-Kindergarten or Early Childhood Education enrollment. As the information in this report reveals, charter enrollments and demographics exhibit considerable variation. It would be a mistake to generalize about individual Minnesota chartered public-school **K-12** enrollment. *Additionally, since 2019, the Minnesota Department of Education no longer provides exact counts or percentages for schools serving over 90% of low-income students, English Language Learners, and students with disabilities. Unfortunately, this results in an undercount of these student groups in this report, marked with an asterisk.*

Statewide, Minnesota **K-12** charter enrollment has increased by **603%** from **10,162** in **2001-2002** to **71,740** in **2025-2026.**

Statewide, charter schools enroll a higher percentage of students from low-income families (**57.00%** vs. **37.01%**), students of color (**65.27%** vs. **38.18%**), and English Language Learners (**24.96%** vs. **9.37%**) compared to traditional districts.

K–12 charter enrollment grew over the last two decades in Minneapolis and St. Paul, while **K-12** enrollment in both urban districts has declined over the last two decades. Recent charter growth has been concentrated not only in Minneapolis

		and Saint Paul, but increasingly in **suburban** and **greater Minnesota communities**.

Importantly, this report does not address school effectiveness; instead, it highlights several trends observed over the last 24 school years:

STATEWIDE DATA:

- Statewide, **K-12** enrollment in public schools, including district and charter sectors, increased slightly from **841,697** (**2001-02**) to **843,287** (**2025-26**).
- Statewide, Minnesota **K-12** charter enrollment has increased by **603%** from **10,162** in **2001-2002** to **71,740** in **2025-2026.**
- During the same **2001-2002** to **2025-2026** period, statewide traditional district public school **K-12** enrollment declined from **831,535** to **771,547**, a decrease of 7.7% - almost 60,000.
- Statewide, charter schools enroll a higher percentage of students from low-income families (**57%** vs. **37%**), BIPOC communities (**65.27%** vs. **38.18%**), and English Language Learners (**24.96%** vs. **9.37%**) compared to traditional districts.
- The enrollment of students with disabilities in traditional districts is **18.04%** and, in chartered schools, **16.95%**, a difference of approximately **1.09%**.
- Enrollment in chartered public schools has increased from **1%** to approximately **8.4%** of total **K-12** Minnesota public school enrollment.
- **Recent charter school growth has been concentrated outside of urban centers.** Over the past decade, approximately **75–80% of new charter school openings** have occurred in **suburban and greater Minnesota communities**.
    - In the last six years, **25** new charter schools have opened statewide. Of these, **12** opened in suburban communities and **7** in greater Minnesota, compared to **4** in St. Paul and **2** in Minneapolis—meaning **80%** of new schools were located outside the Twin Cities' urban core.
    - Over the last ten years, **45** new charter schools have opened. Of these, **23** were in suburban communities and **11** in greater Minnesota, compared to **11** combined in Minneapolis and St. Paul—representing **75%** of new schools located in suburban and rural areas.
- Additionally, in the last four years, **two of the state's larger online charter schools** relocated from Minneapolis to suburban communities, further reinforcing this geographic shift.
- While **K-12** charter enrollment has grown in Minneapolis and St. Paul, alongside declining urban district enrollment, new charter school openings have increasingly occurred in suburban and greater Minnesota communities.

Urban Enrollment Changes

Minneapolis public charter school enrollment **1,921** (**2001-2002**) to **11,136** (**2025-2026**).	Minneapolis Public School's enrollment **47,658** (**2001-2002**) to **28,814** (**2025-2026**).
St. Paul public charter school enrollment **3,598** (**2001-2002**) to **22,163** (**2025-2026**).	St. Paul Public Schools enrollment **43,714** (**2001-2002**) to **31,114** (**2025-2026**).

Over the last twenty years, there has been a decline of thousands of students from low-income families and students of color enrolled in Minneapolis and St. Paul traditional public schools and an increase of thousands of these students in the charter public school sector.

In Minneapolis, comparing the 2001-2002 and 2025-2026 school years:

- As of 2025-26, charters in Minneapolis enrolled, on average, a substantially higher percentage of BIPOC students (89% v. 63%), students from low-income families (76% v. 53%), and students whose native language is not English (46% v. 22%).
- Minneapolis Public School District enrolled, on average, a slightly higher percentage of students with special needs (17% to 15%)
- Enrollment of students from low-income families in Minneapolis traditional schools decreased from 31,910 to 15,254.
- Enrollment of students from low-income families in the Minneapolis charter sector increased from 1,579 to 8,545.
- Enrollment of BIPOC students in the Minneapolis traditional district decreased from 35,054 to 18,295.
- Enrollment of BIPOC students in the charters located in Minneapolis increased from 1,726 to 9,884.

In Saint Paul, comparing the 2001-2002 and 2025-2026 school years:

- As of 2025-26, charters in Saint Paul enrolled, on average, a slightly higher percentage of students from low-income families (65% v. 64%).
- Saint Paul Public Schools enrolled, on average, a slightly higher percentage of students whose native language is not English (31% v. 28%), students with special needs (18% v.16%), and BIPOC students (78% v. 71%).
- K-12 enrollment in Saint Paul charters of students from low-income families increased from 2,683 to 14,378.
- K-12 enrollment in Saint Paul traditional schools of students from low-income families decreased from 28,524 to 19,908.
- K-12 BIPOC enrollment in charters located in Saint Paul increased from 2,993 to 15,835.
- K-12 BIPOC enrollment in Saint Paul traditional schools decreased from 30,102 to 24,400.

Conclusion

In conclusion, this comprehensive analysis of K-12 enrollment data in Minnesota's public schools reveals dynamic shifts in the educational landscape over the past two decades. The transformative surge of over 600% in K-12 charter enrollment stands out against the backdrop of modest statewide enrollment growth and declining traditional district public school enrollment.

↗ System shift	◎ Who is being served	↔ Coordination need
Charter enrollment has fundamentally reshaped Minnesota's urban education landscape.	Students of color and students from low-income families are increasingly attending charter schools.	Enrollment patterns suggest a growing need for stronger coordination across district and charter sectors.

Methodological note. This report presents descriptive trends and does not evaluate school effectiveness.

Charter schools, particularly in Minneapolis and St. Paul, continue to play a crucial role in serving a diverse student demographic, often enrolling higher percentages of students from low-income families, students of color, and English Language Learners compared to traditional districts. Additionally, the observed differences in enrollment of students with disabilities between traditional districts and charter schools highlight the nuanced landscape. As chartered public-school enrollment has reached over 8% of the total K-12 public school population, it underscores the growing impact and choice these schools provide to students and families. This emphasizes the pivotal role of charter schools in addressing the needs of diverse student populations and contributing to the evolving landscape of educational choices within the state.

Acknowledgements

The authors express gratitude to the Minnesota Association of Charter School Authorizers, whose financial support made this report possible. We also thank Joey Ciernan and Michael Padgett of the Minnesota Association of Charter Schools for their support and for providing trend data on charter school openings over the last decade.

This report was co-authored by Khalique Rogers, Director of the Catalyst for Systems Change, and Aaliyah Hodge, Senior Consultant. The data presented is sourced from information available on the Minnesota Department of Education website, and the authors take responsibility for any inaccuracies in the interpretation of the data.
